

SUMMER CAMPS (GRADES 6TH–12TH)

DRONES PROVIDED IN CLASS

Intro To Drones

Learning how to operate a drone commercially is not a simple prospect; with so many laws, rules and regulations to navigate, and so many different training providers, it can be confusing and intimidating. With Intro to Drones, we've addressed the problem. We understand what it takes to succeed as a commercial drone operator, and we focus on building a strong foundation of skills to support this success. Our course is taught over three days and it helps to get a good understanding of all things drones, making this the perfect course for aspiring professionals and employees in both the private and commercial sectors.

Students receive hands-on training from our instructors, who share their experiences and knowledge about flying commercially, for both the ground and the air. The instructors will guide students through the growing world of drones and their uses. We will cover how to operate the drone manually and through automation. How drones are being used in the different industries (Real Estate, Agriculture, Photography and Videography, Mapping, First Responders and Emergency Personnel). Come find a way to integrate drones into your business or just learn how to fly for your next vacation.

Monday - Wednesday, July 8 - 10

Multipurpose Room - MP 114

11:00 am - 1:00 pm

\$150.00

Aerial Photography and Video

Aerial photography and video is a fun yet extensive two-day class designed to give valuable insight to wanting to create top quality, compelling, marketable aerial drone photography. This is a drone class that is not only as much about how to fly, but also why we fly- to gain a new perspective of the world around us, to integrate this technology into our workplace, and to share amazing drone photographs with the world.

Whether this is your new hobby, or you are pursuing aerial imaging as a career, this class will teach you in two days what normally would take months or years of trial and error to figure out. The curriculum is generally advanced-beginner to intermediate-level.

Even newbies will walk away with all the knowledge they need to get off the ground. The instructors will share their wisdom in an upbeat classroom. Looking forward to sharing the world of drones with you and hearing how you use it.

Thursday - Friday, July 11 - 12

Multipurpose Room - MP 114

11:00 am - 1:00 pm

\$120.00
